(54) Title: OPTICAL ANALYSIS DEVICE

(57) Abstract: An optical analysis device comprises a lighttransmitting member for transmitting light, having an external face capable of immobilizing a detectionobjective substance, a light separating means for separating an exciting light introduced into the light-transmitting member at a first end thereof and transmitted through the light-transmitting member, and a fluorescence light produced by excitation of the detection-objective substance by the exciting light, at a second end of the light-transmitting member, and a detecting means for detecting the fluorescence light separated by the light separating means.
